

Universal Digital Agents That Learn, Remember, and Act

Guangyi Liu | Ph.D. Candidate, Zhejiang University
Research Internship / Talent Program Interview | Expected Jun 2028

Candidate Snapshot | Research Focus and Impact

- ① Research focus | Universal digital agents
and GUI agents
- ② Current role | Ph.D. candidate at ZJU
APRIL Lab
- ③ Research output | 5 first-author works ·
ACM MM / ACL / TMLR
- ④ Academic impact | 415 citations · 122 first-

Education and Growth

2019–2023 | CUMT · B.Eng. in Automation | No. 1/203 · National Scholarship ×2

2023–2025 | Zhejiang University · M.S. | NeSC Group

2025–2028 | Zhejiang University · Ph.D. | APRIL Lab · Expected Jun 2028

Industry Research | From Prototypes to Real Systems

vivo AI Lab (Aug 2024–Aug 2025) |
PhoneGPT, demonstration learning, online
evaluation, and memory benchmarking
Kuaishou (Aug 2025–Jul 2026) | Agent post-
training, long-horizon context management,
and app defect detection
Research | Formulate questions and validate
methods
Engineering | Build environments, data
pipelines, and automated evaluation
Application | Connect agent research to real product workflows

Universal Digital Agents

- Learn | Demonstrations, feedback, RL, and post-training
- Remember | Context management, experience reuse, and continual adaptation
- Evaluate | Online protocols, interpretable metrics, and failure diagnosis
- Act | Cross-app tool use and long-horizon execution

End-to-End Ownership | From Question to System

Environment and data | Exploration,
demonstrations, rollouts, feedback, and
memory traces

Policy | Prompting, SFT, RL, and context-
management actions

Find the bottleneck →
make it measurable →
close the loop

progressive scrutiny and failure diagnosis

System | A reproducible pipeline from
exploration to deployment

Five First-Author Works, One Coherent Research Arc

Survey → LearnAct → MemGUI-Bench → MobileForge → MemGUI-Agent

From field mapping to demonstration learning, memory evaluation, self-improvement, and long-horizon agents
